THOMASVILLE NURSERIES "Homasville, Georgia."

A section of our exhibit at Sixth Annual Rose Show, Thomasville, Ga., April 29, 1927

Roses of Thomasville

Terms of Business

Location.—Main nursery, lathhouses, trial grounds and field office at intersection of Boston and Summerhill roads with Boulevard, two miles east of Thomasville. Rose, conifer and fruit tree nursery and business office on Boston road, three miles east of Thomasville. The Thomasville-Boston road is a link of the Lone Star Trail from Los Angeles to St. Augustine, and is also known as Georgia State Road No. 38.

Invitation to Visitors.—Visitors are welcome at our place every day in the year. We transact no business on Sundays, but leave our gates open for visitors to see the Azaleas, Roses, etc. A visit to the nurseries is not an obligation to purchase.

Terms.—Cash with order or satisfactory references, except to parties of known responsibility.

Transportation at Purchaser's Risk.—All transportation expenses are to be paid by the purchaser; our responsibility ceases upon delivery, in good order, to forwarding companies.

Substitution.—We do not substitute unless so authorized. It is well, as the season advances, to name substitute varieties to be used in the event of shortage.

Inspection.—Our nurseries are regularly inspected by a representative of the State Entomologist, and a certificate to this effect, and that the plants have been fumigated as required by law, accompanies every shipment, and we comply with the various laws of the states into which we ship. We offer no plants grown on nut grass lands.

Claims.—If, by any possibility, errors should occur, they will be promptly rectified, if claim is made within ten days after receipt of the goods.

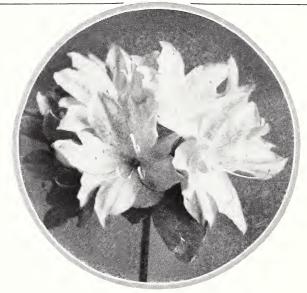

Guarantee.—We cannot control conditions after plants leave our hands, and we cannot, therefore, guarantee our plants to live. We do guarantee all stock sent out to be well rooted, well grown, true to name, properly packed and shipped according to instructions.

Quantity Rates.—Forty or more plants at the 100 rate, 300 or more at the 1000 rate.

Order Early.—We cannot too strongly urge the advisability of ordering early. In so doing, one gets the assortment and pick of the stock and avoids disappointment of possible failure to get order filled complete. Orders may be sent early and stock reserved for later delivery.

About Ourselves.—Thomasville Nurseries is owned by P. J. Hjort & Son, none other are financially interested, and there is no connection with any other nursery concern.

Address all communications and make remittances payable to Thomasville Nurseries, Thomasville, Ga.

Foreword

T IS with more than usual pleasure that we approach the 1928 planting season, since we are better prepared than ever to serve our territory. We have by long odds the largest and best assortment of Roses that we have ever grown, we are better equipped to supply landscape planting material, and for the first time we are offering a strong assortment of heretofore scarce Azaleas.

And while a wide assortment of choice stock has been developed, there has also been developed a stronger business organization of loyal men, determined to maintain the ideals which put character into this business, and made it not merely "a nursery," but "an institution."

Visitors are always welcome here. In January, February and March the main attraction is the Azaleas, where may be seen sixty-five varieties of Indica and the new Kurumes. In April the Roses come into bloom, and continue until late Fall. It is a source of genuine pleasure that each season brings an increase of visitors. One does not have to buy every time a visit is made. We like for visitors to make a critical inspection of our stock at any time of the year and judge it by the strictest comparison.

In perhaps no line of business does the customer have to rely so closely on the reliability of a firm as in the nursery industry. It is usually possible to buy plants at cheaper prices than offered by established, reputable nurseries. We cater strictly to the patronage of those who want the best material, correctly labeled.

With unfailing regularity we send our catalogue into the Southeast. It is impossible to send a solicitor into every home, but when you receive this catalogue it is our nvitation to you to buy from us. We have been in business here thirty years. The benefit of the experiences we have gained in these thirty years are available to our customers.

THOMASVILLE NURSERIES, THOMASVILLE, GA.

By S. C. Hjort, September 15, 1927.

We Go On Record

I will continue to give personal attention to growing nursery stock of the highest quality, and keeping labels straight.

P.J. Hjork.

I will devote the closest attention toward giving you landscape service that is not to be excelled.

M.C.Hadley

I will see that the material in your orders is dug properly and labeled correctly.

E.K. James.

I will see that your order is packed carefully and dispatched promptly.

A. C. Thines gr.

They've said it. From the center of operations, the office, I'll help 'em do it.

DHjord

Broad-leaved Evergreens

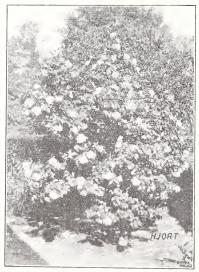

In the South we may have a great diversity of broad-leaved evergreens, both flowering and strictly foliage plants, which may be attractively used in landscape effects in many ways, as in foundation planting, screen work, grouping, hedges or specimen effect.

ABELIA grandiflora. This plant fills a wider usage than perhaps any other evergreen. It can be trimmed as a specimen plant, used in groups, in screening about buildings, or trimmed as a dense hedge plant. The graceful, drooping stems and branches are covered with dark, glossy leaves, making it one of the most beautiful, popular and satisfactory evergreens. When trimmed it makes a densely compact plant, and is covered from May until frost with a profusion of small, tubular-shaped white flowers about an inch long, with pink throat. It is hardy as far north as Philadelphia, and we cannot recommend it too highly for its various uses.

Each	12	100
12 to 18 in., strong, from open ground		\$25.00
18 to 24 in., strong, from open ground	5.00	40.00
2 to 3 ft., strong, from open ground	7.50	60.00

AUCUBA japonica. A beautiful plant of dwarf habit, large, dark green leaves, bright red berries. It does best in shady location, and is one of the very best plants to use in such places. 8 to 12 in., \$1.00; 12 to 15 in., \$1.25, 15 to 18 in. \$1.50.

AUCUBA japonica variegata (Golddust Plant). A form of the above with leaves beautifully spotted bright golden. Like the green variety it requires a shady location. Prices same as Aucuba japonica.

Camellia japonica, Residence of Mr. and Mrs. Louis Steyerman, Thomasville, Ga.

CAMELLIA japonica. This delightful Winter flowering shrub or small tree, commonly called "japonica" is too well known to need description. Practically all of the Camellias planted in America were imported up to the time Quarantine No. 37, shutting off importations, went into effect. Camellias can be grown in America, and nurserymen are gradually developing a stock. We offer in double varieties, red, deep pink, shell pink, variegated. We also have single red. Strong plants from 4-in. pots, 8 to 12 in., \$1.00 each, \$10.00 per 12; from 5-in. pots, 12 to 18 in., \$1.50 each, \$15.00 per 12.

CAMELLIA, Single Red. 12 to 18 in., \$1.00 each, \$10.00 per 12; 18 to 24 in., \$2.50 each, \$25.00 per 12.

EUONYMUS japonieus, Duc d'Anjou. A desirable evergreen of dark green leaves with yellow center. Fine to use with green-leaved plants for contrast. 12 to 18 in., stocky, from 6-in. pots, \$1.50 each.

EUONYMUS japonicus, aureo-marginatus. A beautiful form of Euonymus with golden margined leaves. 12 to 18 in., stocky, from 6-in. pots, \$1.50 each.

Ligustrums, Pittosporums and Abelias attractively used in foundation planting. Residence of Mr. and Mrs. P. R. Lilly, Valdosta, Ga.

ILLICIUM anisatum (East India Anisetree). A small, evergreen tree of light green foliage. The leaves when bruised emit a pleasing anise fragrance. 12 to 18 in.. \$1.00 each, 18 to 24 in., \$1.50 each.

LIGUSTRUM amurense, South. Most popular hedge plant in the South. 2 to

3 ft., \$1.50 per 12, \$10.00 per 100.

LIGUSTRUM iwata. A comparatively new and scarce evergreen Privet of great merit. This plant has glossy green leaves with lighter center and habit of growing very compact. Visitors to our nurseries usually show a preference for this variety over other evergreen Japanese Privets. It is now used extensively in this section in foundation, mass and screen plantings, and as trimmed specimens or a dense hedge. A strong reason for its popularity is its resistance to white fly, which infests Privet hedges in some localities. We especially recommend Ligustrum iwata, a shrub which should be used all along the coastal section.

12 to 15 in			80.00
15 to 18 in		15.00	
18 to 24 in			
2 to 3 ft	. 3.00		

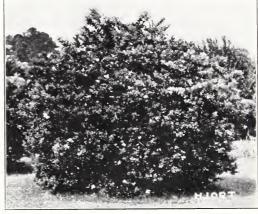

LIGUSTRUM lucidum (Waxleaf Privet). A beautiful form of evergreen Japanese Privet with large, very dark green leaves, and large heads of white flowers in May. followed by black berries which are retained throughout the Winter. Adapted to all extremes of cold and heat in the South. See illustration page 8.

Same prices as Ligustrum iwata.

LIGUSTRUM marginatum aureum. One of the finest of the variegated evergreens, having as the name implies, leaves margined in gold. Is a tall and upright grower, and makes a beautiful specimen plant. It is also used most effectively in groups with green leaved plants, Each 12 2 to 3 ft. \$2.50 \$25.00

LIGUSTRUM quihoui (Summer Privet). Small, dark green leaves, shapely and compact bush. 2 to 3 ft., \$2.00; 3 to 4 ft., \$3.00 each.

3 to 4 ft.. 3.50 35.00 4 to 6 ft.. 5.00

Large specimen of Ligustrum lucidum in bloom

MAGNOLIA grandiflora

(Evergreen or Southern Magnolia). The most prized native evergreen t

prized native evergreen tree. It is valuable for lawns, specimens, avenue plantings or for shade.

NANDINA domestica (Japanese Nandina). A very showy evergreen or nearly evergreen shrub. In Winter its leaves turn a bright red and hang on the plant until early Spring, which, with the bright red berries, makes it a conspicuously attractive specimen plant.

OLEANDER (Nerium Oleander). One of the finest evergreens for specimen or mass plantings, and popular in South Georgia, the Gulf Coast and Florida. It is not adapted to colder climate. We have selected hardy varieties, and offer single and double of pink, white and red. We especially recommend the double pink, a fragrant variety and thrifty grower. 75c. each, 87.50 per 12, 860.00 per 100. Extra heavy plants, 81.50 each.

PHOTINIA serrulata. Handsome shrub with dark green foliage, leaves turn a striking bright red in coldest weather and remain so until they fall in early Spring when new leaves form. Same prices as Pittosporums; have only two smaller sizes.

PITTOSPORUM tobira. An excellent shrub, very popular and extensively used in the South, having dark green leaves clustered at the ends of branches. The plant is of compact growth, flowers yellowish white, very fragrant, appearing in early Spring. The Pittosporum may be used in foundation planting, massing, trimmed as a specimen or as a dense hedge. Ours are stocky plants. Too much cannot be said in favor of this evergreen, for in its many uses it is greatly prized in landscape plantings, and we always advise its planting.

Coniferous Evergreens

- **CEDRUS deodara.** For many years in Southern gardens this tree has stood out as the handsomest of all the conifers. Bright, bluish green foliage, tree grows up cone-shaped, with graceful, lateral branches. Each 12 2 to $2\frac{1}{2}$ ft. \$3.50 \$35.00 3 to 4 ft. 5.00
- **CEDRUS libani.** This is the famous Cedar of Lebanon which King Solomon used in building his temple. Itself a stately evergreen, resembling the Cedrus deodara, but slower in growth. Will grow farther north than other Cedars. Same prices as C. deodara.
- CEPHALOTAXUS fastigiata. A small tree of heavy, deep green foliage and graceful habit. 8 to 12 in., from pots, 75c.; 12 to 18 in., \$1.00 each.

Coniferous evergreens for immediate effect Residence of Mr. and Mrs. Philip Rouse, Thomasville, Ga.

Foreground, Juniperus virginiana kosteri; background, Cedrus deodara

- CUNNINGHAMIA lanceolata (sinensis). One of the aristocrats among coniferous evergreens, shaping up like the well-known Deodar Cedar. The foliage is of the darkest green, pine-like, and very compact. Cunninghamias in Georgia and Florida have stood all extremes of temperature perfectly. 3 to 4 ft., \$5.00 each.
- CUPRESSUS sempervirens pyramidalis (Italian Cypress). Densely compact foliage of dark green, tree very slender, fills an important place in landscape plantings. Same prices as Juniperus ashfordi.
- JUNIPERUS ashfordi. A development from the English Juniper, with graceful, oblong branches, of brightest bluish-green color. In contrast to English and Irish Junipers, ashfordi is loose and wayy, making it a good conifer in group and foundation plantings.
- JUNIPERUS communis. This is the English Juniper, of narrow, upright growth and bluish green foliage. Fine for certain landscape uses where narrow and pointed type is desired.

Prices of Juniperus ashfordi and communis Each 12 Each 12\$3.00 \$30.00 3 to 4 ft.....\$5.00 \$50.00 **JUNIPERUS** japonica sylvestris. We are decidedly pleased with this Juniper after

- watching it in landscape plantings the past few years. It is one of the most graceful of all the conifers, growing somewhat on the order of virginiana glauca, but of dark green and feathery foliage. 2 to 2½ ft......Each \$4.00 2½ to 3 ft.....Each \$5.50
- ...Each 7.50
- **JUNIPERUS chinensis.** A conifer that is coming rapidly into favor in this section as it becomes better known. Bright green foliage, tree shapes up somewhat conelike, but is compact, however not so dense as to burn out. 18 to 24 in. \$2.00 each.
- JUNIPERUS pfitzeriana. Long recognized as the leading spreading or prostate Juniper in this section. Its foliage of bluish green color does not brown by coldest weather.
- JUNIPERUS virginiana glauca. A graceful, tall and somewhat columnar conifer with the most decided blue color of all the blue-green trees. It holds color both Summer and Winter, and succeeds so well that it is always to be desired. Same prices as Juniperus japonica sylvestris.

Thuja orientalis aurea nana (Biota aurea nana)

JUNIPERUS virginiana kosteri. One of the finest of prostrate Junipers. Of bright, bluish green color, and compact and uniform spread.

Prices of Juniperus virginiana kosteri and pfitzeriana

THUJA orientalis aurea nana (Biota aurea nana). This is Berckman's dwarf golden Arborvitae, a perfect success in the South; does not burn out like some evergreens that have been used here. The strain we have is Hill's selected, of much finer 'coloring and form than some on the market. It fills a great many needs in landscape planting, and is fine for matched specimens for tubs or urns.

 THUJA orientalis compacta.
 A compact and almost rounded coniferous evergreen of bright green foliage.
 Admirably adapted to Southern plantings.

THUJA orientalis compacta pyramidalis. A development from the above of pyramidal and compact growth.

THUJA orientalis, Rosedale Hybrid (Biota Blue-green). A Rosedale Arborvitae of loose and open foliage, not so susceptible to burning out inside as was the old Biota Rosedale. Beautiful, bluish-green foliage.

We have in limited assortment, a lot of other conifers.

Azaleas

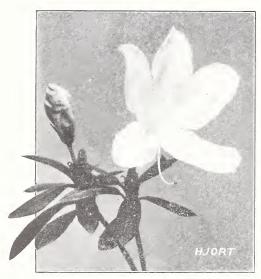

The Azaleas are the most attractive of Winter-flowering shrubs in the South. Their value in landscape uses is too little recognized, for evergreen Azaleas are indispensable in Southern landscape effects. Varieties of Azalea indica, coming into flower

when so little else is in bloom, are a mass of beauty on the private estates of Northern Winter residents of Thomasville in the late Winter and early Spring, and no one who has seen these plantings will ever forget the scene. The famous Magnolia Gardens near Charleston, S. C., where many varieties of Azaleas are seen by throngs of visitors every Spring, has been said to be more like heaven than any place on this planet.

Azaleas, contrary to general belief, are by no means hard to grow. They thrive in rather acid soil, leafmold or pond muck, with

Azalea Phoenecia. One-half natural size

Azalea alba

AZALEAS—Continued

little or no manure, but, being surface feeders, they like a good mulch of leaves and Pine straw and should not be allowed to suffer for want of water. They should be planted in partly shaded situations. Clay, lime, and an excess of potash should be avoided. When Azaleas are well grown they are among the most delightful and satisfactory plants in existence. The flowers last in perfect condition a long time, and the wonderful color effects are rarely approached by any class of plants.

There is a prejudice in some quarters against the purplish-pink, or cerise, varieties, but this shows a lack of the proper appreciation of values in color effects. What could be more delightful than a combination of Azalea formosa and Spiraea reevesiana flore pleno as a fore-

ground to a piece of Pine woods? To extend the blooming season, Azalea phoenicia and Azalea Omurasaki could be used, as they are at their best when Azalea formosa is about through.

Owing to the high color effects of these Azaleas, it is not always wise to use them together with reds or clear pinks, as the colors disagree, but with white or yellow-flowering shrubs the combination is delightful. Another feature in favor of the purplish-pink Azaleas is that they are often successful under unfavorable conditions where other varieties would barely exist. Azaleas often vary in color in different localities. Nurserymen grade by spread as well as height.

The Rhododendrons, which are used so largely in landscape effects farther north, are worthless here except in high altitudes. Their place is filled by the evergreen Azaleas, which have all the colors of the Rhododendrons, and several besides.

All of the Azaleas we list are evergreen.

VARIETIES DESCRIBED

- Alba. Large, single flowers. A very hardy kind, used extensively in the North. Plantings are successful on Long Island. Used a lot about Thomasville. Tall grower.
- Amoena. Another hardy Azalea, a popular kind in the North, but succeeding equally as well in the South. Small claret-pink flowers, small dark green leaf. Tall grower.
- Duc de Rohan. Salmon-pink, medium flower, profuse bloomer, fine green foliage. We recommend it as one of the best Azaleas for the Southeast.
- **Elegans.** An even shade of clear pink as a rule, but some years is inclined to show some purple. An upright grower, produces large single flowers. An early variety. See color illustration, front cover.
- Formosa. The most generally satisfactory Azalea grown in the Southern states. A planting of this variety at Inwood Plantation near Thomasville is a mass of beauty in early Spring. Large, single, purplish-pink flowers, dark green leaves. A thrifty kind, easiest of all to grow. A midseason variety and tall grower. See color illustration, front cover.
- George Frank. This is a very scarce Azalea, and one that has attracted more attention at our place than any other variety. It is a profuse bloomer, and is one of the earliest varieties. The flowers are described as rose-pink with deep carmine spot. They never show a trace of purple. See color illustration, front cover.
- spot. They never show a trace of purple. See color illustration, front cover. **Phoenicia.** This variety is of practically the same color as Omurasaki, but the flower is slightly smaller. However, there is a noticeable difference in the shape of the leaf, and of all Azaleas we have observed that Phoenecia will stand the most sun. A late flowering kind and tall grower. See color illustration, page 13.

An Azalea plant in bloom. Azaleas produce a mass of bloom in early Spring

Azalea Omurasaki

AZALEAS-Continued

Omurasaki. A very fine Azalea, producing large, single flowers, midseason to late. In color this kind shows slightly more pink and less purple than Formosa, as a rule, but in some seasons there is practically no difference in color. Omurasaki makes a spreading bush and is a profuse bloomer. It is the principal kind used at Greenwood Plantation, which each year attracts many visitors, and is the finest planting of Azaleas at Thomasville. We strongly recommend this variety. See color illustration.

Vittatti fortunei. The best variegated Azalea. The plant is of upright growth and is the earliest Azalea to come into flower at Thomasville. The blooms are like Azalea alba, but striped purplish-pink. See color illustration, front cover.

Red Azaleas. These are always scarce, but we have developed a fairly strong stock of some of the best shades of red, and this season offer them at no increase in price. These include such choice kinds as Prince of Orange, Glory of Sunninghill, Coccinea Major, Pride of Dorking, etc.

Kurume Azaleas

Within the past few years a wonderful new race of Azaleas, the Kurumes, has been introduced in America. Mr. E. H. Wilson, an eminent authority on Azaleas, says in his "Monograph of Azaleas": "To my mind, the Kurume Azaleas are the loveliest of all Azaleas. The colors are so pure and exquisite and of every hue and shade from white, pink and salmon to scarlet, crimson and the richest magenta. The hose-in-hose forms have none of the ugly features of double flowers, but on the contrary are singularly attractive and last much longer. They are extremely floriferous, and in season the blossoms often completely hide the leaves."

The oldest and best collection of Kurume Azaleas in Japan is that of Mr. Kijiro Akashi. This foremost propagator of Japanese Azaleas states that the

best Kurume varieties are:

Hinodegiri, (deep red, single)
Takasago (pale pink, hose-in-hose)
Azuma Kagami (deep pink, hose-in-hose)
Kirin (deep rose, hose-in-hose)
Kumono-uye (pure salmon, single)
Kurainohimo (carmine, hose-in-hose)
Kurenoyuki (white, hose-in-hose)

We have developed a stock of these plants, which also go by the American names of

Cherry Blossoms Hinodegiri Coral Bells Carmine Pink Pearl Salmon Queen Snow

The Kurume Azaleas are extremely hardy, small plants having stood the severe freeze of January, 1924, without any injury. They are all very dwarf, but are profuse bloomers, and may be used for pot culture or outdoor planting.

6 to 8 in	\$1.00	\$10.00
8 to 12 in	1.50	15.00
19 to 15 in	2.00	20.00

We have in limited stock other Kurumes in salmon, orange, shades of pink, red, and purple.

This small place, neatly kept, won first prize in Lion's Club Beautiful Grounds Contest, at Waycross, Ga. Residence of Mr. and Mrs. W. G. King. Designed and planted by our Landscape Department

Deciduous Trees and Shrubs

ACER dasycarpum			desirable	shade and	i specimen i	tree.	Foliage

ALTHAEA (Hibiseus syriacus). A free flowering shrub or small tree, producing single and double flowers in red, pink, purple, variegated and white, in the Summer.

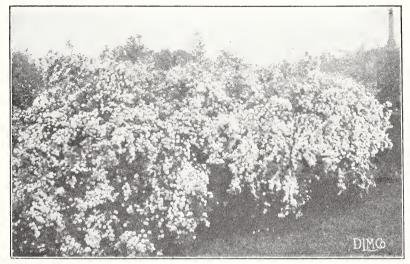

Each 12 100 Each 12 100 2 to 3 ft. \$0.50 \$5.00 \$40.00 4 to 5 ft. \$0.75 \$7.50 \$60.00 3 to 4 ft. \$60 6.00 50.00

CALYCANTHUS floridus (Sweetshrub). The Sweet Shrub of the old-fashioned gardens of the South is really too well known to need description. The chocolate-colored flowers are always borne in profusion. Same prices as Deutzias.

CORNUS florida. The native, large, white flowering Dogwood; a very showy tree in early Spring. Same prices and sizes as Althaeas.

CORNUS florida flore pleno. A double form of the above. Grafted, 3 to 4 ft., \$1.50 each.

CORNUS florida rubra. Similar to the white flowering Dogwood, but with flowers of rose-pink color. A very showy tree in early Spring. 2 to 3 ft., \$1.50; 3 to 4 ft., \$2.50, 4 to 5 ft., \$3.50 each.

Spiraea, Mass Planting

CERCIS canadensis (Redbud or Judas-tree). In early Spring this tree is covere	d
with reddish-purple flowers. One of the best native plants. Each 12 100	
2 to 3 ft	0
3 to 4 ft	0

DEUTZIA. Very showy, Spring flowering shrubs, fine for massing or screen work, or adapted to natural plantings. We offer pure white and white with pink tinge.

	Each	12	100
1-year plants	\$0.35	\$3.50	\$25.00
2-year plants	.50	5.00	40.00
3-year plants	.75	7.50	60.00

- **EXOCHORDA** grandiflora (Pearlbush). Large, pure white flowers produced in great profusion early in March. When in full bloom the plants have the appearance of a snowbank. Fine for massing. 50c. each, \$5.00 per 12.
- FORSYTHIA (Goldenbell). Late Winter and early Spring flowering shrubs with golden-yellow flowers. We have upright and drooping kinds. Prices same as Deutzias.
- **GINKGO biloba** (Maidenhair-tree). A beautiful tree with foliage resembling the Maidenhair fern. While this tree is deciduous, it is a conifer. A good shade tree. 2 to 3 ft. \$1.00, 3 to 4 ft. \$1.50 each.
- **HYDRANGEA otaksa.** The fine old Hydrangea, useful and beautiful in southern plantings. In South Georgia the bloom is usually blue, due to existence generally of clay subsoil. To make it pink dig out the clay and fill in with black or sandy soil. Prices same as Deutzias.
- **JASMINUM primulinum.** A rapid growing shrub producing an abundance of yellow flowers in early Spring. Can be trimmed in shape, or the canes trained up as a climbing shrub. Same prices as Deutzias.
- **LANTANA.** Beautiful, showy, quick growing shrub. White, yellow, orange, pink, red. Ready March 15th. 40c. each, \$4.00 per 12, \$25.00 per 100.

LONICERA fragrantissima (Upright Bush Honeysuckle). Masses of fragrant white flowers are produced on upright and slightly drooping branches in Winter. An excellent deciduous flowering shrub for using with evergreens. Same prices as Deutzias.

LAGERSTROEMIA indica (Crapemyrtle). A vigorous, deciduous shrub or small tree, with beautifully fringed flowers in the Summer. The Crapemyrtle is easy to grow, thriving often when given no care for years. Clumps of these trees brighten the roadways here and there in the South. When fitted into landscape plantings they are extremely valuable for their long season of bloom. We have red, pink, lavender, purple and white. See page 18.

as Deutzias.

POPULUS fastigiata (Lombardy Poplar). Lombardy Poplars give quick effects in landscape plantings. They show up the first season and give sky line and background long before other trees develop any considerable height. In formal effects they are sometimes used where Italian Cypress is too expensive. Among other shrubs they give variety and interest to the planting.Each 124 to 5 ft.\$0.80\$8.805 to 7 ft.12.0012.007 to 9 ft.2.0020.00

WEIGELA rosea. A vigorous shrub, producing a wealth of showy, bell-shaped flowers in early Spring, color rose-pink. This plant makes an attractive mass for screen planting. Same prices as Deutzias.

Canna, The President

Cannas

Nothing excels cannas for quick effect of bright color needed in plantings for the long Summers of the Southeast. A planting of cannas was a feature which attracted visitors to our grounds the past Summer. To keep cannas blooming a long season keep the old flowers cut off when they begin to form seed. If canna worms appear, cut the affected leaves off and burn them. You can then keep your canna bed bright from Spring till late Fall. Bulbs, 10c. each, \$1.00 per 12, \$7.50 per 100.

City of Portland. One of the newer cannas, a deep pink, does not fade in hot weather. Is a free bloomer, flowers borne well above the green foliage. 3½ ft.

Eureka. The best white canna. The large, substantial flowers are very freely produced on strong, upright stalks. 4 ft.

Italia. Golden yellow with bright orange-scarlet center, green foliage. 41% ft.

Kate Gray. One of the very best red-flowering cannas of green foliage. A free bloomer, flowers borne well above the foliage. 5 ft.

King Humbert. This is decidedly the most popular canna for this section, always the great favorite with those who have tried many kinds. It bears heavy heads of brilliant orange-scarlet blooms well above rich, bronze foliage. It is a very free bloomer, flowering over a long season. 5 ft.

Louisiana. Large, dark red flowers and green foliage; very tall grower. 6 ft.

The President. The new red canna about which so much has been said. It is of rich, glowing scarlet color, and the foliage is green. Not as tall grower as Kate Gray or Louisiana, but the flowers are brighter.

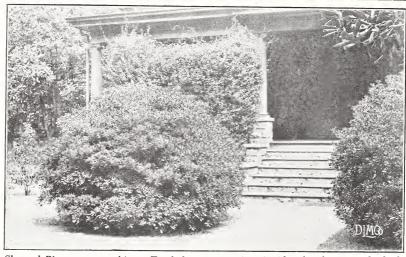

Wyoming. This canna makes great plumes of orange blossoms, borne well above purplish bronze foliage. It is one of the best cannas for this section, a worthy companion to King Humbert and Yellow King Humbert. 5 ft.

Yellow King Humbert. A yellow form of King Humbert, but with green foliage. Deep yellow, with orange-red dots. Easily the showiest and best yellow canna for this section. 5 ft.

Pansies

STEELE'S MASTODON AND PITZONKA'S PRIZE STRAINS

Each of these strains is very floriferous and produces mammoth flowers. We can supply good mixed plants or separate color of blue, yellow or white. Pansy plants are ready November 1st and may be set as late as January. 50c. per doz., \$1.50 per 50, \$3.00 per 100, \$20.00 per 1000.

Sheared Pittosporum tobira. Trachelospermum jasminoides for front porch shade
Residence of Mr. and Mrs. Cader S. Parker, Thomasville, Ga.

Vines

Prices on Vines Each	
Medium plants\$0.50	\$5.00
Strong plants	7.50
Extra strong plants 1.50	15.00

Except where noted.

FICUS repens. An evergreen climber with small, bright green leaves. An excellent plant for completely covering and screening brick walls, posts, rockwork, etc.

HEDERA algeriensis (Algerian Ivy). Large showy leaves, vine clings to any surface; fine for climbing pine trees, or for making ground cover.

HEDERA helix (English Ivy). Shiny, evergreen leaves, clings to any surface without support. Extensively used in covering trunks of trees and in trailing from window boxes. From 2½-in. pots, 20c. each, \$2.00 per 12, \$15.00 per 100.

HEDERA maderiensis (Madeira Ivy). Leaves larger than English Ivy, thick and heavy, fine for ground cover or climbing on trees.

LONICERA halliana (Climbing Honeysuckle). A rampant climber with evergreen foliage and fragrant white flowers, changing to yellow.

LONICERA sempervirens (Coral Honeysuckle, Woodbine). An excellent native vine of fast growth with evergreen foliage and coral-red blooms. Attractively used. on fences, pergolas, etc.

TRACHELOSPERMUM jasminioides (Rhynchospermum, Star Jasmine). A rapid growing, twining vine of dark, glossy green leaves. It is covered in the Spring with a mass of starry, white flowers of intense and pleasing fragrance.

VINCA minor (Periwinkle). A rapid growing vine with dark green leaves and blue flowers. Used extensively as a ground cover, and for trailing from window boxes. 20c. each, \$2.00 per 12, \$15.00 per 100.

VINCA variegata. A variegated Vinca which finds its principal use in trailing from window boxes as a screen. 20c. each, \$2.00 per 12, \$15.00 per 100.

WISTERIA chinensis. A vine used extensively in the South for covering pergolas and arched-over drives. Long, drooping clusters of fragrant blooms in early Spring. We offer purple and white.

Ophiopogon jaburan

Ophiopogon

Jaburan. A border plant in great favor wherever known. Grass-like, narrow green leaves and straight stem of purplish-blue flowers, height 8 to 10 in. Used extensively at the Wade and Archbold places near Thomasville in bordering walks and drives, and is coming to be used in many small places. The flowering season is all Summer long. \$1.50 per 12, \$10.00 per 100, \$75.00 per 1000.

Palms

Palms are among the most beautiful of evergreen plants used in Southern plantings. Specimen palms, erect and stately, always attract the most favorable attention. The varieties we handle are the hardiest, and can generally be planted in Florida and along the Gulf Coast 150 miles inland.

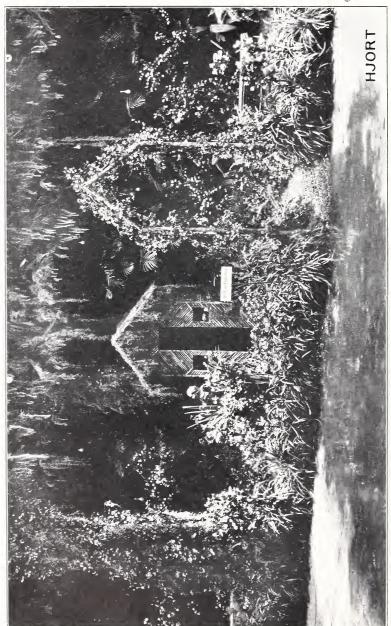

COCOS australis (Pindo Palm). A very hardy palm of graceful, long, recurved leaves, pinnate, and bluish green color. Succeeds some farther north than Phoenix or Washingtonias.

WASHINGTONIA robusta. One of the most beautiful of all palms, and perfeetly adapted to Florida and coastal plantings. Specimens at Quitman, Moultrie and other Georgia cities withstood the severe freeze of January, 1924, without serious injury. Georgians who visit Florida in going through Gainesville are charmed by the sight of the beautiful Washingtonias planted on the streets of that city. We believe more Washingtonias should be planted in South Georgia and the coastal section. $_{\mathrm{Each}}$ 1 to 1½ ft.....\$1.00 \$10.00 1½ to 2 to 3

Cocos australis
Residence of Mr. and Mrs. R. H. Warren,
Albany, Ga.

Sometimes we can supply Cabbage, almetto and Sago Palms. Write your requirements.

Exhibit, Mill Pond Plantation at Thomasville Rose Show, April 29, 1927

The Thomasville Rose Show

ITH unfailing regularity, Thomasville, the "City of Roses," holds its Rose Show in late April, when thousands turn aside from their engagements to make the annual pilgrimage on this delightful occasion.

The Sixth Annual Rose Show, held April 29, 1927, despite the exceptionally dry weather which cut short a lot of bloom, was a decided success, as from the Roses grown at Thomasville there was an abundance for the exhibits. The show was held in the large and commodious tobacco warehouse, which has become the home of the Rose Show.

The weather in late April is generally fair, and roads that lead into Thomasville are good. It is not a hard trip to come by auto from as far as Atlanta, over roads in a large part paved, the balance semi-hard surfaced.

While the visitor to the Thomasville Rose Show is amply rewarded by seeing a gigantic display of Roses in many varieties, there are also to be seen exhibits of many other flowers, including Sweet Peas, Gladiolus, Larkspurs, Annuals, Potted Flowering and Foliage Plants, etc. The greatest of all Rose shows here will be staged in April, 1928.

And while you are in Thomasville, we invite you to drive through our Rose fields, where may be seen the best collection of Rose varieties in Georgia, perhaps the Southeast. In addition to fields of standard varieties, we have a test block where many new and scarce varieties are under observation. We really have a Rose show of our own in our fields from early April till frost.

Don't miss the joy of Thomasville Roses.

Bush and Climbing Roses used together at Thomasville, Ga.

Roses

PRICES OF ROSES

2-year budded plants, 70c. each, \$7.00 per 12, \$55.00 per 100. 1-year budded plants, 50c. each, \$5.00 per 12, \$40.00 per 100.

The Rose has justly been termed the "queen of flowers" for its wide range of beautiful colorings, pleasing fragrance, great variety of form and habit and easy culture. Surely no Southern garden is complete without the Rose, where such a wealth of varieties may be grown, including Teas, which cannot withstand the rigorous northern Winters.

VARIETIES

While there are many varieties that do well in the South, a best dozen may be selected that stand out conspicuously above all others in various localities, even this may be reduced to six, or even three. It is generally agreed that the three Radiance Roses: Radiance, Red Radiance and Mrs. Charles Bell lead.

Before the advent of Radiance, Mme. Lambard, Maman Cochet, and White Cochet were the leaders in the lower South, and are still immensely popular—they have seen many new kinds disappear. For those who like variety, a best 25 or 50 kinds may easily be selected.

Rose growing has advanced rapidly in the past few years. We have been diligent in testing new kinds, and from them some wonderful Roses are selected. We can never forget "finding" Radiance, Countess of Gosford, Rose Marie and others in our test rows.

LOCATION OF THE ROSE BED

The Rose garden is best separate and apart from other plants. Do not plant them with evergreen or flowering shrubs, and do not plant annuals all through the Rose beds. However, the formal edges of the Rose beds may be softened by planting low growing annuals or perennials. Tree roots should be grubbed out. Roses like an open space and plenty of sunshine. How beautifully Roses grow in the nursery, in full sunshine and unhampered by tree roots! Drainage is important, the Rose does not like wet feet, but the extreme of a dry location should be avoided.

SOILS AND PREPARATION

In the Southeast, soils are extremely variable, hence no set rule can be laid down for Rose soils; one should add to the soil available those qualities needed. Do not get the idea that Roses need all clay; they do not. Red clay is excellent for Roses, but too stiff in itself. Rich garden loam or woods earth, together with plenty of well rotted barnyard fertilizer, should be added. If the soil is sandy, then add the red clay, with the other properties.

PLANTING

The planting season in the Southeast is from November 1 to April 1. When Rose plants are received from the nursery, they should be planted as quickly as possible, and in setting them take only one plant at a time from the damp packing material, to avoid the roots becoming dry. Budded Roses should be set as deeply as is required to cover the bud union, which is just below the point where the Rose branches out. It is easy to plant Roses correctly, and half of the success with them depends on it.

FERTILIZING AND CARE

Thorough preparation of the soil will take care of the fertilizing problem for some time, but after the plants start a vigorous growth, they should have a little bonemeal stirred into the surface, and a general dose of fertilizer in the Fall or early Winter. During dry weather, water the Roses thoroughly twice a week so as to thoroughly soak the ground, but do not give a superficial watering once a day, as this draws the feeding roots to the surface, where the sun kills them, causing damage to the plants.

Prune Hybrid Perpetuals to 12 inches above the ground, Hybrid Teas more sparingly and Teas very little; remove dead and weak branches. The best time for pruning is February in this latitude, later farther north.

CONTROL OF PESTS AND DISEASES

Rose aphis and thrips are more or less prevalent in the entire South; to kill them spray with a tobacco preparation—the spray we use is Black Leaf 40, a teaspoonful to the gallon of water. Black spot and powdery mildew are the prevalent fungous diseases. The best control of black spot is to spray with Bordeaux mixture, the plant and the ground thoroughly before the Rose leaves appear. Often this will prevent the disease for the season. To eliminate powdery mildew, dust with lime-sulphur. It will not be found difficult to keep the Rose plants healthy if these directions are followed.

BUDDED ROSES FOR THE SOUTH

The superiority of budded Roses is no longer questioned in the lower South, and they are coming to be more generally used in the upper portion of the South, in the East and other sections. Our Roses are budded on vigorous stocks adapted to the South. Our Rose stocks are grown from cuttings, and we cut out the eyes below the Rose bud, to prevent appearance of "suckers." This method removes the objection to budded Roses. It is poor economy to buy weak and inferior own root Roses from the North. A dozen such could not furnish the real joy contained in one large, healthy, superlatively fine budded plant.

Hybrid Tea Roses

Betty. Coppery-yellow with shadings of rose; beautiful, long-pointed buds, excellent bloomer. One of the best varieties.

Bloomfield Abundance.

A new Rose producing an abundance of salmon-pink flowers singly and in sprays, on the order of Mme. Cecile Brunner, but larger.

Bloomfield Endurance.
A new pure white Rose, full blooms, free flowering; foliage dark green and shiny.

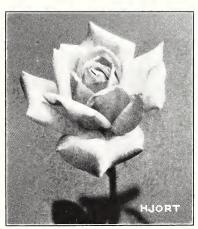

Bloomfield Perpetual.

This new Rose has the appearance of a bush Cherokee. It has very large, fragrant, single white flowers, and is a free bloomer.

Countess of Gosford. A
Rose from England. Exquisite salmon-pink with
delightful shadings of
rose; a thrifty grower and
profuse bloomer over a
large flowering season.
One of the best Roses and
a variety we always recommend when asked to
name the best kinds.

Countess of Gosford

Rose Columbia

Charles K. Douglas. Scarlet, flushed velvety crimson, well shaped blooms, fragrant.

Columbia. Brilliant pink flowers on stiff stems. Introduced as a forcing Rose, it has proven to be a fairly successful garden kind.

Etoile de France. This Rose is generally considered the best of the dark red hybrid teas for this section. It is a dark velvety crimson, and an excellent bloomer.

Edward Mawley. One of the best of the comparatively new red Roses. Deep, velvety crimson, fine bloomer, bush is strong and healthy grower.

Gladys Holland. A comparatively new Rose of good qualities. The bush has proven to be vigorous, and produces large and sweet-scented blooms of buff, shaded yellow, on stiff stems. This is an English Gold Medal Rose.

Humboldt. Best described as an upright growing form of Rose Marie, the flowers being practically identical. This is one of the finest new Roses we ever grew, and we recommend it highly. See illustration on back cover.

Jonkheer J. L. Mock. A great Rose from Holland. Carmine-pink outside, imperial pink inside of petals, large flower. A vigorous new Rose.

Kaiserin Auguste Viktoria. This Rose has long been a great favorite in the South, with its large blooms of creamy white.

Killarney. One of the finest Roses ever produced. A dependable grower; free bloomer over a long season; especially pretty buds, color varies from light pink to deep pink. A great favorite in the South.

Edward Mawley. See page 29

Killarnev

- Killarney Brilliant. While this Rose does not bloom quite as freely as its parent, Killarney, it is a Rose of fine color, deepest pink, almost red.
- Killarney Queen. The flowers of this Rose are somewhat larger than Killarney and are of unvarying dark pink throughout a long season of flowering.
- K. of K. This is an orange-red form of Red Letter Day, and equally as strong and vigorous. A dependable Rose for the Southeast.
- Lady Alice Stanley. The longer we grow this Rose the better we like it. Deep coral rose on outside of petals, inside flesh pink; profuse bloomer, shapely flowers on upright stems. A fine Rose.
- Lady Pirrie. Long-pointed buds and large, well formed flowers, outside reddish salmon, inside lighter. A good Rose.
- Laurent Carle. Large, full flowers of brilliant velvety crimson, a good bloomer, strong grower, and satisfactory Rose.

View in main Rose field, Summer 1927

Luxemburg. The best new yellow Rose we've had in our fields in many days. Makes large, beautifully pointed bud, and open flower; is full and compact. A deep golden yellow is the color of this new Rose. See illustration on back cover.

National Emblem. One of the finest red Roses ever introduced. Strong grower, free bloomer, deep, rich crimson color. One of the best of all Roses at Thomasville.

Mme. Marcel Delanney. Large and fragrant flowers of pale pink, beautifully shaded hydrangea-pink, on stiff stems. This rose was introduced by a leading Dutch grower, and is exactly like Jonkheer J. L. Mock except color.

Mrs. A. R. Waddell. Deep apricotpink, shading to corange-salmon. The bush is vigorous and free flowering, a satisfactory kind.

National Emblem

Mrs. Charles Bell. This rose can best be described as a light pink Radiance, being a sport from that variety. We have had it under observation since its introduction, and we find it equally as good grower and bloomer as its parent Radiance; in fact, it stands conspicuously above most roses in gardens where it is planted in the Southeast.

and it has been a big attraction to visitors to our nurseries. In color it varies from shell-pink to salmon pink. See illustration on back cover.

Mrs. Wakefield Christie-Miller. Soft pearly blush, shaded salmon, very large flowers on stiff stems. The bush is a healthy one and can be depended on for a large crop of flowers.

Ophelia. Salmon flesh, shaded rose, beautiful buds on good stems. An immensely popular Rose.

Prima Donna. An even shade of light red, shapely flowers.

Radiance. This is the Rose we unhesitatingly call the best of all varieties, and it is the one in the biggest demand by those who have tried many kinds. In color it is a brilliant rosy-carmine, displaying beautiful opaline pink tints in the open flower. As a cut flower variety Radiance leads the field of outdoor Roses, its nearest competitors being its sports. Its wonderful growth, freedom of bloom and large and shower that the leads are desirable and shower that the leads are shown to be shower that the leads are shown tha

Ophelia

and shapely buds and full flowers on stiff stems make it a complete success in the South. See illustration on back cover.

Red Radiance. A sport of Radiance, and of the same freedom of bloom and vigorous growth characteristic of this family. Like Radiance and Mrs Charle. Bell, it is a wonder for blooming in hot weather when most Roses have slowed ups Easily the leading red Rose. See illustration on back cover.

Red Letter Day. An extremely vigorous Rose, producing strikingly showy, half-double, velvety crimson flowers; very attractive.

Rosalind. This Rose is a sport from Ophelia, and the best of the developments from that parent. It shows more intense pink tones than Ophelia; the buds are very shapely, and the flower lasting.

Rose Marie. This is the finest new rose since Radiance and its sports were put on the market. Rose Marie shapes up very much like the well known Kaiserin Auguste Viktoria, making attractive buds and full flowers. The color is a clear, bright rosepink, and the flower is fragrant. It is a wonder for freedom of bloom, throughout the long rose blooming season in south Georgia. We unhesitatingly recommend it, and have grown sufficient stock to offer it at no increase in price. See illustration on page 28.

September Morn. Flesh pink, fragrant, large flower.

Shell-Pink Radiance. See Mrs. Charles Bell.

- **T. F. Crozier.** The ideal yellow rose is yet to be produced, but we never had one of this color that looked more promising than T. F. Crozier. It has shown great vigor of growth, and produces large, full and globular blooms of canary-yellow. The flowers are shaped so much like those of the Radiance family, and the stems so strong, that it has the appearance of being a "Yellow Radiance." It deserves a tryout in every section of the Southeast.
- **W. C. Gaunt.** Brilliant scarlet-crimson, buds are especially attractive. This is a new red rose, and the brilliant display it made in our fields the past two seasons was a big attraction. It is a strong grower.

White Killarney. A white sport of the well known Killarney, and a valuable and popular rose.

Rose Lecture

The services of Mr. S. C. Hjort, a member of the American Rose Society's Committee of Consulting Rosarians, is available to Rose Societies, Garden Clubs, etc., and correspondence is invited.

Mme. Lambard

Papa Gontier

Maman Cochet

Tea Roses

Alexander Hill Gray. Solid yellow in bud, opening lighter, a vigorous grower, free bloomer.

Duchess de Brabant. Light rose to shell-pink, an excellent grower and bloomer; one of the most popular Roses in the South.

Helen Good. A blush pink sport of Maman Cochet, with the good qualities of its parent.

Lady Hillingdon. Beautiful pointed buds of deep yellow, the favorite of the deep yellow Roses in this section.

Mlle. Franziska Kruger. Coppery-yellow, a wonderful bloomer, the best Tea Rose of its color.

Freiherr von Marschall. One of the best red Roses. A vigorous grower, with long pointed buds and large, full blooms of dark carmine red.

Mme. Demaizin. A big, double Rose of flesh-pink color. One of the best Roses at Thomasville.

Mme. Lambard. Bright, deep rose, variable in color, deepens in tone in the Fall; large, fine form, beautiful buds, strong grower, excellent bloomer. We grow this well-known favorite in large quantities because it is always in demand and always satisfactory. No one who has seen the great display of Mme.

Mme. Melanie Soupert

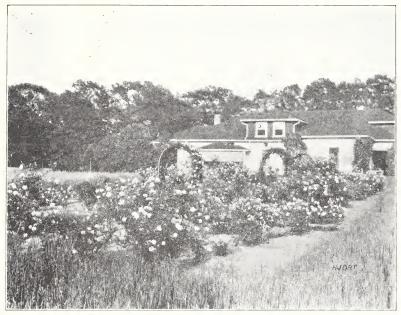

Lady Hillingdon

Lambard Roses on the private estates near Thomasville will ever forget the beauty of the sight. This Rose held first place with us 20 years. It is the best of the Tea Roses. See color illustration on page 33.

Mme. Melanie Soupert. A salmonyellow Rose with shadings of pink; a very free bloomer, long pointed buds and large, heavy, double flowers. The plant is vigorous and a consistent bloomer throughout a long season. A Rose we especially recommend.

Mrs. B. R. Cant. Deep rose to light red, flowers somewhat similar to Maman Cochet in form; a wonderful bloomer and an altogether satisfactory Rose.

Mrs. Dudley Cross. In form and blooming qualities it easily passes for what it is often called, a yellow Maman Cochet. It is a yellow Rose, tinged with pink in the same manner as the White Cochet is tinged with pink. One of the best bloomers.

Rose Garden of Mrs. F. Wiegand, Thomasville, Ga.

Maman Cochet. This is the famous Pink Cochet. Light pink, shaded with bright rose; beautiful, long pointed buds and large and full flower. The most generally popular Tea Rose in America and one that is always a success in the South, giving blooms over a long season. See color illustration on page 33.

Marie Van Houtte. Canary-yellow, deeper center, border of petals tipped bright rose. A vigorous grower, profuse bloomer and great favorite in this section.

Minnie Frances. Dark pink, strong grower and good bloomer; long buds, a Rose on the order of Mme. Lambard.

Papa Gontier. Rosy-crimson; fine, long pointed buds, a vigorous and altogether excellent Rose. See color illustration on page 33.

Safrano. A fine old Tea Rose of bright apricot color and free blooming qualities. It is beautiful in bud and in mild Winters continues to bloom along the Gulf Coast.

Mrs. Dudley Cross

William R. Smith

White Maman Cochet. A white Rose of the excellent qualities of its parent, Maman Cochet. Edges of petals tipped rose. The best white Tea Rose.

William R. Smith (The Blush Rose). A cross between Maman Cochet and Kaiserin Auguste Viktoria, of lovely blush-pink color. Free bloomer, strong grower: long, pointed buds, heavy flowers.

Hybrid Perpetual Roses

Baroness Rothschild. Delicate shell pink, a chaste and beautiful Rose. A vigorous grower, a good bloomer in its

Duchess of Sutherland. A new Rose of its class which has attracted a lot of attention. Large, shapely buds and fine open flowers of beautiful, peachpink color.

Frau Karl Druschki. This grand white Rose, sometimes called White American Beauty, has become renowned as the very highest type of its class and the best snow white Rose ever introduced. It is a strong grower and good bloomer, and its magnificent flowers are nothing less than glorious. It is a true Paperwhite, without a tinge of other coloring.

George Ahrends. This is one of the m st beautiful Roses ever produced, and it will be many days before a variety of its merits can be displaced. It is of delicate pink coloring, and keeps well as a cut flower. Owing to its form it is often called the Pink Frau Karl Druschki.

Frau Karl Druschki

Heinrich Munch. Soft pink, very large and full, a fine companion to Paul Neyron and Frau Karl Druschki.

Paul Neyron

- J. B. Clark. At Thomasville this is the most popular of all the red hybrid perpetual Roses. Intense crimson flowers, free and strong. Always forms a strong showing at the Rose Show.
- J. G. Glassford. Like the other hybrid perpetual Roses listed here, J. G. Glassford is a very free and vigorous grower. The buds are long and the flowers of largest size, color deep crimson-lake which holds well. A fine new Rose from Ireland.
- King George V. A wonderful new English hybrid perpetual Rose, our favorite of the reds. Immense, with double flowers of dark, velvety crimson; destined to become popular in this section along with Paul Neyron and Frau Karl Druschki.

Paul Neyron. Really too well known to require a description. We can recommend it to anyone who wishes to plant hybrid Roses; it is a dependable grower and bloomer in the South. It is the largest Rose known; deep, rosy pink, full flower, fragrant.

View in main Rose field, Summer 1927

Climbing Roses

Beauty of Glazenwood. Orange yellow with reddish tints; a good climbing Rose. Also known as Gold of Ophir and Fortune's Double Yellow.

Cherokee. A vigorous climber with single white flowers which appear in earliest Spring. A well known Rose in this section.

Cloth of Gold. Sulphur yellow, deeper center, large and double.

Cl. Lady Ashtown. Soft rose colored blooms. Those who did not succeed with the bush Lady Ashtown should try this vigorous climber.
Cl. Killarney. A climbing Rose in much favor about Thomasville. It is a vigorous

grower and profuse bloomer.

Cl. Maman Cochet. A pink climber of sterling qualities, identical in color with the bush Maman Cochet.

Cl. Mrs. Aaron Ward. Those who have not been able to grow the bush Mrs. Aaron Ward are offered a climber, which is a good yellow variety.

C1. White Cochet. A most dependable white climber, extensively used in this section. Large, shapely buds and flowers, like the bush form from which it was derived C1. White Killarney. A very good white climbing Rose, color, form and flowering

habit like the bush kind.

Gainsborough. Creamy white, shaded salmon, a strong Rose and free bloomer.

Pink Cherokee. Glowing pink flowers shaped like the white Cherokee. Red Cherokee. A red Rose developed from the Pink Cherokee.

Reine Marie Henriette. Long considered the best red climber for the South; here only Paul's Scarlet Climber is as popular. Cherry-red, fine buds, heavy flower, a great favorite.

Reve d'Or. Considered the best yellow climbing Rose at Thomasville, where many kinds have been tried. Vigorous, free flowering, of good foliage.

Solfatare. Clear sulphur-yellow, very fine, large, shapely bud and fluffy double open flower.

Wm. Allen Richardson. Deep orange-yellow flowers of medium size borne in profusion.

Yellow Banksia. A vigorous grower, has often been planted to climb tall trees. It is one of the very earliest flowering Roses, producing a great profusion of sulphurvellow flowers with the first coming of Spring. We recommend it highly.

A planting of Mrs. Charles Bell Roses

Pillar Roses

- American Pillar. Rich, rosy pink to brilliant carmine, with a little white in center; semi-double, long stems. One of the best climbing or pillar roses; vigorous plant, glossy foliage, profuse bloomer.
- Cl. American Beauty. This rose produces an abundance of carmine-red flowers, and its shiny foliage adds to its beauty.
- **Dorothy Perkins.** Beautiful deep pink, flowers borne in large clusters of small, double blooms, sweet scented; fine for use on fences or trellis. In sections where mildew has developed, dust this rose with lime sulphur to control the disease.
- **Dr. Huey.** Semi-double flowers of the deepest scarlet borne in large clusters, never fades blue. This rose trained as a climber or pillar rose is very showy.
- **Dr. Van Fleet.** This is one of the most beautiful roses ever introduced. The plant is vigorous, makes a good climber or pillar rose.
- Mary Lovett. This rose is like Dr. Van Fleet and Cl. American Beauty, except that it is pure white.
- Paul's Scarlet Climber. One of the most brilliant roses ever introduced, because of its clear, vivid, shining scarlet, in large, semi-double flowers which remain unusually long, and in good condition on the plants. These flowers retain their intense coloring until they fall. This rose may be used as a climber, or trained up as a strikingly effective pillar or archway rose. We recommend it highly.
- Red Dorothy Perkins. It is a good deal to claim for a rose, but we are within bounds when we describe Red Dorothy Perkins, or Excelsa, as a brilliant Crimson Rambler on glossy, varnished, Wichuraiana foliage. In certain sections where mildew has developed, this rose, like the pink variety, should be dusted with lime sulphur as a control measure.
- Silver Moon. Flowers very large, pure white, semi-double, petals of great substance, beautifully cupped, forming a clematis-like flower. The large bunch of yellow stamens in center adds to its attractiveness. A vigorous climbing or pillar variety.

Orleans Roses fronting shrubbery border

Dwarf Polyantha Roses

Baby Echo. Delicate, light pink flowers are produced in profusion; a long blooming season.

Catherine Zeimet. Small, double, pure white flowers produced in profusion over a long flowering season. The best of the white baby Roses, and a variety always satisfactory.

Erna Teschendorff. Deep red, double, dwarf, free flowering. It is easily the leading red baby Rose, and with a little attention in keeping the seed pods off will bloom from Spring till frost.

La Marne. This is an excellent baby Rose. Semi-double flowers, bright salmon-rose at the edges, rosy blush inside, are borne freely from Spring till frost, if seed pods are not allowed to mature.

Mrs. W. H. Cutbush. Shell-pink, small double flowers, excellent bloomer, and has come to be known as the best pink baby Rose.

Orleans. Cerise-red with white eye at center, a very showy and satisfactory baby Rose. Fine for a border or hedge of dwarf Roses.

Peach Blossom. Another good baby Rose, with flowers of beautiful peach-pink color, borne in clusters. A good bloomer.

Miscellaneous Roses

Rosa Hugonis. A single yellow species from China; throws long, half-climbing branches covered with single flowers. It is one of the most strikingly showy roses ever introduced, and thrives in this section. A very early bloomer.

Louis Philippe (Bengal). Deep crimson flowers and shiny foliage. An excellent Fall and Winter bloomer, and makes one of the best hedge Roses.

WE HAVE MANY OTHER ROSES

in too limited quantity to list in a catalogue. Altogether in our fields are growing about 306 varieties, and it is quite likely if we have not catalogued one of your favorites if you will write us we can supply it. We have many new Roses, along with older ones.

Peaches

Peaches for commercial orchards may be planted in many sections of the Southeast, and for home use in practically the entire territory. We have selected the varieties best adapted to this section. All are Freestone kinds except as noted.

	Each	$\tilde{1}2$	100
2 to 3 ft	\$0.35	\$3.50	\$25.00
3 to 4 ft	50	5.00	40.00

VARIETIES OF PEACHES

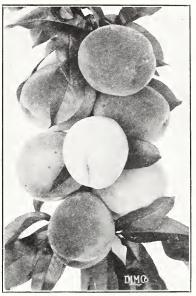

Belle of Georgia. Large fruit, skin white with red cheek, flesh white, quality excellent, prolific variety. July.

Size large, yellow with red cheek, flesh yellow, quality excellent, prolific and dependable. June.

Elberta. Fruit very large, yellow with red cheek, flesh yellow, flavor excellent, a choice variety. July.

Early Elberta. Just what the name implies. June.

Greensboro. Large and showy, skin bright yellow with red cheek, flesh juicy and of fine quality, semi-cling variety. An excellent kind for general planting. June.

Carman Peaches

Hiley. An early Belle of Georgia. June.

wel. A great favorite in Florida. Medium, oblong, highly colored, red outside, flesh yellow, finest quality. Last of May.

Mayflower. A large, red cling Peach of good quality. The earliest variety. May.

Persimmons

Within the past few years, as they have become better known, varieties of Japanese Persimmons have rapidly come into favor in the Southeast. They are of easy culture, and can be depended on to bear annually. Same prices as Figs.

VARIETIES OF PERSIMMONS

Tamopan. Fruit large, rounded-flattened, oddly marked by constriction around. quality very good. Tree a vigorous grower, bears well, does not require pollination from other varieties to fruit. September.

Tane-Nashi. Fruit very large, roundish-conical in shape, flesh seedless, quality good,

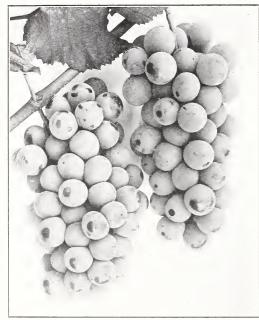

variety prolific, the most desirable market kind. Self-pollinating. September. **Triumph.** A heavy bearer of medium-sized fruits of the very best quality; a most

desirable variety for home use. Self-pollinating. October.

We have a limited quantity of other persimmons, Fuyugaki, Okame, Yemon, Hyakume, Yedo-Iichi and Gailey, at no increase in price.

Plum

EXCELSIOR PLUM. We have found this variety, a hybrid, which originated in north Florida, to be the best kind for this section. Fruit large, purplish red, skin thin, flesh firm and juicy, of excellent flavor. Ripens early, about June 10th. Tree is very vigorous and a prolific bearer. Same prices as figs.

Niagara Grapes

Grapes

The Grape should be more generally planted in the South; it is one of the surest of all fruit crops. There are two distinct classes of Grapes, the bunch class, and the well known Muscadine family to which the Scuppernong belongs.

Strong Plants: Each 50c., 12 \$5.00

Carman. A vigorous and prolific bunch Grape, resistant to disease. Medium size, black, finest quality.

Concord. A blue-black bunch variety; sweet, pulpy, tender, quality good. Vigorous grower, prolific, berries large.

Delaware. A heavy bearing bunch variety, berries medium size, red when fully ripe, finest quality.

Niagara. A good market bunch variety, berries white, large and of good quality.

Scuppernong. The most popular of the Southern muscadine class. Berries large, eight to ten in cluster, color brown when ripe, flesh pulpy, very vinous, sweet. Vine is free from diseases and insect depredations. Very prolific bearer. Commonly called the White Scuppernong.

Thomas. Another member of the Southern Muscadine class, sometimes erroneously called the "Black Scuppernong." Large clusters of six to ten berries. Violet to black when ripe, large, sweet, prolific. Free from disease.

Figs

The Fig can be depended on for a heavy crop of fruit every year. It comes into bearing very early, is fine for canning, and the market for the fresh fruit is developing. Figs require very little cultivation above mulching. In an orchard they should not be plowed deeply, as the roots are close to the surface.

\$3.50 \$25.00 2 to 3 ft.....\$0.35 .50 3 to 4 ft..... 5.00 40.00 weather like other figs.

Brunswick. Large, purplish black, good quality, early bearer, a favorite. Celeste. A small fig of fine flavor, highly valued for canning. An extremely hardy variety, can be grown over a wide territory. It is by long odds the favorite kind in the Southeast. Sometimes called Brown Sugar Fig.

Green Ischia. A variety of fine quality, fruit of medium size, greenish-white, tree a

strong grower.

Lemon. A very large fig of yellowish-green color, flavor good. It is next to Celeste in popularity in this section.

Pears

Owing to the prevalence of Pear blight in the South the Pear industry has been at a standstill for many years. This disease, a bacterial one, could not be controlled by spraying, and but merely checked by severe pruning.

It has long been recognized in this section that the only solution of the problem of Pear growing would be the development of a variety resistant to Pear blight. A number of such Pears have appeared, and failed through inferior quality of fruit, tree being shy bearer or not sufficiently resistant to blight.

THE PINEAPPLE PEAR

One variety, however, has stood the test in southern Alabama, Georgia and northern Florida—the Pineapple Pear. This Pear is an introduction from China, and its value was first recognized in southwest Alabama. Extensive trials in south Georgia and in Florida have shown favorable results, to the extent that some growers offer it as guaranteed against blight. We do not guarantee it, in keeping with conservative policy, but with us it has never shown a trace of blight, and we have had it next to other Pears which blighted badly.

Pineapple Pear

With the coming of blight resistant stocks in the near future in quantity, Pear orcharding in the Southeast will take on a new impetus. At present we are using the best stock available, the seedling Japan Pear stock, highly resistant to blight.

The Pineapple Pear is not of as fine quality of fruit as the Le Conte, but it is better than the Kieffer. It is a fairly good fresh eating Pear, and as a cooking or canning Pear and for any culinary use, it is unexcelled. Its season of ripening is July to August. Returns on plantings of Pineapple Pears have been very satisfactory.

Our block of Pineapple Pear nursery trees this season is one of the finest lots of Pear trees ever grown in this section. Our trees are straight, clean and healthy, sure to please.

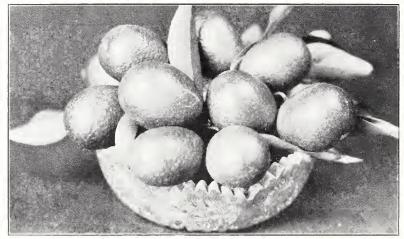

GARBER PEAR. Resembles the well known Kieffer, except tree is more open in growth and fruits earlier. August.

KIEFFER PEAR. A fine variety for canning and preserving. It is a regular bearer in the Southeast, blighting very little most seasons. Fruit large, yellow with reddish cheek. August.

LE CONTE PEAR. An early variety of fine quality, valued for eating when properly ripened. Large, pyriform fruit, pale yellow. July.

PRICES OF PEARS INCLUDING PINEAPPLE PEAR

Eacl	n 12	100
2 to 3 ft\$0.3	5 \$3.50	\$25.0 0
3 to 4 ft	5.00	40.00
4 to 6 ft	6.50	50.00
6 to 8 ft	8.00	70.00

Kumquat Nagami

Citrus Fruits

Apart from their culinary worth, hardy Citrus fruit trees are decidedly ornamental. Kumquats and Satsuma Orange trees, loaded with golden fruit on the dark background of their evergreen leaves at Christmas time always attract favorable attention. Certainly there ought to be many more fruit trees planted in this section, and hardy Citrus fruits deserve to be planted more extensively. Our Citrus fruits are budded on Citrus trifoliata, the hardiest of all stocks.

Satsuma Orange. The hardiest of all Oranges, belonging to the Tangerine family, and a regular and very prolific bearer of deep, orange-colored fruits. The best strain of Satsuma Orange is the Owari, which produces uniform fruits, ripening early, and of the finest flavor. The trees in our nursery were all grown from buds supplied by Mr. W. S. Reeve, Cottage Hill, Fla., from his heavy bearing orchard where he has kept fruit records on the trees. If a tree is a Satsuma orange it does not necessarily mean it is a good one; the safer plan is to buy Satsuma trees grown from selected buds taken from pedigreed trees.

the Winters of south Georgia a long time without serious injury. The fruit is medium to large, of fine quality, and is a heavy bearer.

Meyer Lemon. A new Citrus fruit sent to us from south Alabama several years ago.

Meyer Lemon. A new Citrus fruit sent to us from south Alabama several years ago. Young trees of this Lemon stood as much cold as Satsuma Oranges in the hard freeze of January, 1924.

Teche Pecans

Pecans

The Pecan stands out conspicuously as the leading orchard crop in the South, it being adapted to a variety of soils, and its long life making it worth many times over the value of fruit trees. Seedling Pecans should not be planted in the expectation of gathering a harvest, they are a loss since only a small percentage of them ever make bearing trees of value. We grow budded trees of the varieties that have stood the tests of this section. Different varieties of Pecans have their preferences for different locations. Unless one knows from observation the best varieties of Pecans for his immediate section, we advise consulting the county agent or some local authority as to the most profitable kinds, since no statistics are available covering the South or any state.

			1 101	CES OF	LECANS			
		Each	12	100		Each	12	100

PRICES OF BECAME

VARIETIES OF PECANS

Curtis. Vigorous grower and prolific bearer, especially adapted to Florida, although succeeding in some portions of the northern end of the Pecan belt. Nut just below medium size, but of high quality.

Frotscher. Oblong nut, large, shell very thin, cracking easily, kernels large, full and easily removed, good quality. Tree of spreading habit, thrifty growth. A favorite

in south Georgia.

Moneymaker. A medium, rounded-oblong nut, good cracking quality, kernel full, flavor good. This variety is a heavy bearer, and the one Pecan never known to be affected with scab disease.

Moore. Small, oblong nut, shell thin, cracks easily, kernel plump, quality good. This variety is a very prolific one, and bears large crops in some of the "off years," and can be depended on for nuts every year.

Pabst. Nuts large, well filled, good quality. A vigorous and healthy grower, a favorite in the Atlanta section, and succeeds well in South Georgia.

Schley. Oblong nut, large, very thin shelled, fills well, kernel plump, quality the best of all Pecans, fair bearer. For home plantings, where the highest quality is desired, it is especially recommended. Stuart. Large nut, oblong, fills out well, shell medium, quality good. Prolific and

succeeds over a large area.

Success. Size large, oblong, tapering at apex, shell thin, cracks well, kernel large and full, quality very good. Tree vigorous, a good variety.

Teche. Medium in size but very prolific, thin shell, quality good. In our orchards the most reliable variety. Sometimes known as Frotscher No. 2.

Landscape Department

Our Landscape Department is in charge of competent men, who are expert draftsmen, thoroughly acquainted with the plant material used in the Southeast, know how to use it artistically and effectively.

BALLED AND BURLAPPED EVERGREENS

Practically every evergreen we send out is balled and burlapped. It costs us four times as much to get them up with a clump of earth and wrap in burlap, but it is the **safe** way to do it. Don't be misled by others' cheap prices on "bare-root" stock.

MISCELLANEOUS PLANTS

There are many plants in coniferous and broad-leaved evergreens, deciduous flowering trees and shrubs, Roses, etc., which we have in too limited quantity to list in this catalogue. If you do not see listed something you want, please write us; it is quite probable we would have it.

WE LEAD IN ORNAMENTALS

We don't claim to be the biggest Rose growers in the South; we have no corner on the landscape business, and never broke any fruit tree records. But we are certainly the biggest Rose and ornamental plant growers in south Georgia.

TESTIMONIALS? YES, FILES FULL

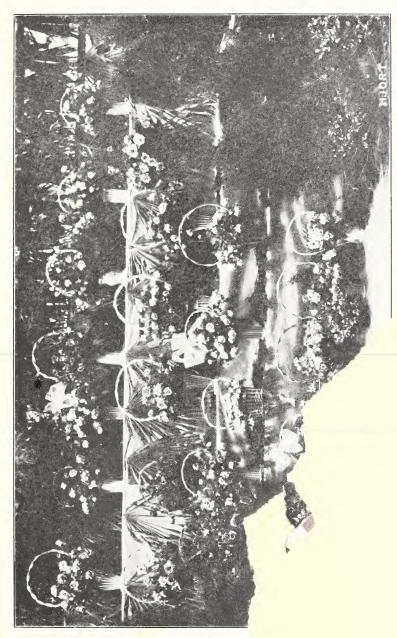

Some catalogues are largely made up of testimonials, carrying a side line of plants. We have on file for those who wish to see them, many, many testimonials telling of success with plants from us, but it is a matter of policy with us to omit them from the catalogue.

We are members of

American Association of Nurserymen Southern Nurserymen's Association American Rose Society
